

Mac OS/X Tunnelblick with OpenVPN

Step 1: Download Tunnelblick

Download the Tunnelblick from : <http://code.google.com/p/tunnelblick/downloads/list>

File:

 [Tunnelblick_3.1.2.dmg](#) 3.4 MB

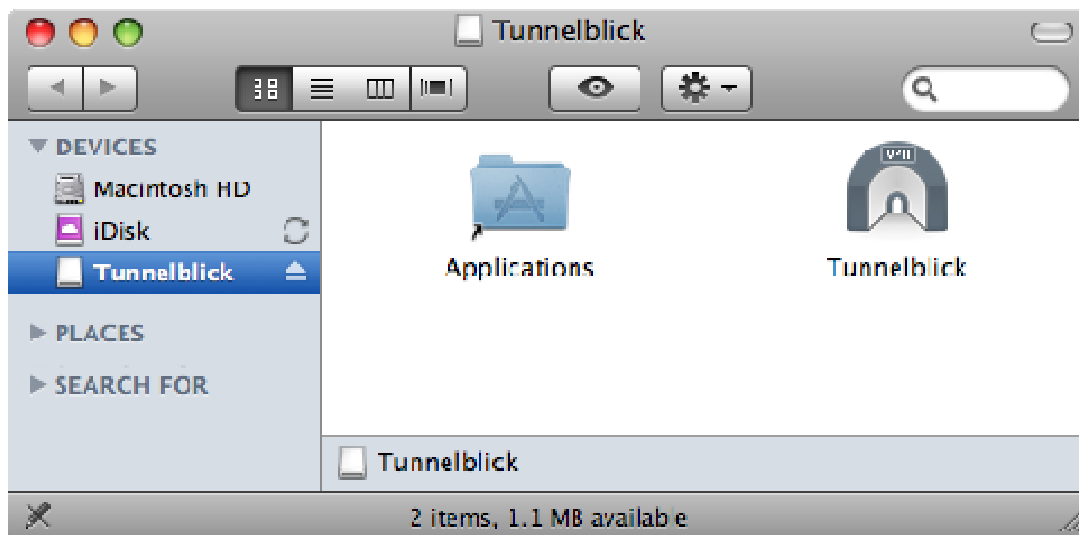

Description:

SHA1 Checksum: 6b6212057e44ed218ac41cd1041489ad56c6dd9a [What's this?](#)

Step 2: Install Tunnelblick

Like most other Mac OS/X applications, Tunnelblick is installed by opening the DMG file and dragging the Tunnelblick icon into the Applications folder.

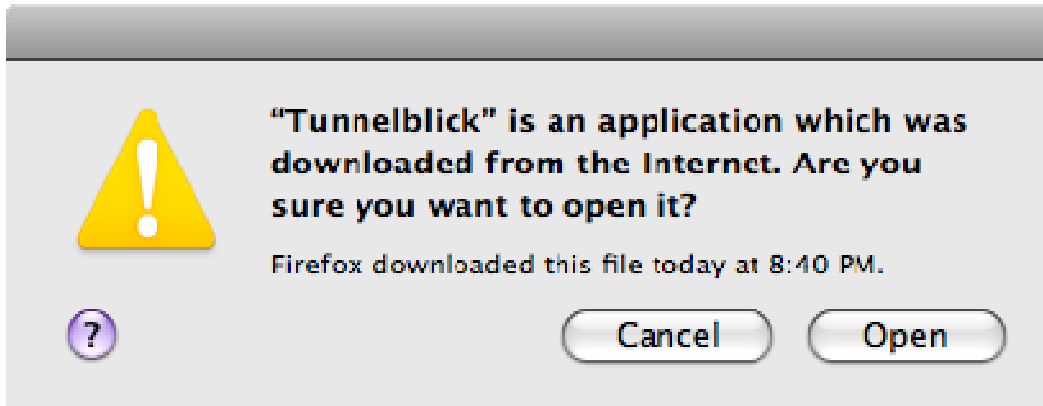

Step 3: Copy OpenVPN Configuration Files

Download our OpenVPN config files at : <http://www.anonyproz.com/config.rar> necessary to create an OpenVPN connection. extract these files from the archive file and copy them to `~/Library/openvpn` or `~/Library/Application Support/Tunnelblick/Configurations` folder

Step 4: Starting Tunnelblick

Start Tunnelblick by clicking the Tunnelblick icon in your Applications folder.

Step 5: Connecting to OpenVPN servers

Click on the dark tunnel and select **the desired OpenVPN server** to start the connection. Once your connections is successful, you will see an open tunnel instead of a dark tunnel. To disconnect from the server , simply select **Disconnect**

Troubleshooting

Followed all the instructions but things are not working for you? Please contact our support department by e-mail at service@anonyproz.com or submit at www.anonyproz.com/supportsuite
